

STORM INDUSTRIES

Project Firefly

Autonomous Swarm Intelligence Platform

Next-generation AI-powered drone swarms that coordinate, collaborate, and adapt — enabling missions impossible for any single aircraft.

Phase 1–4

• Roadmap

Multi-Drone

• Swarm AI

Edge AI

• Onboard

Vision

Where we're heading

One commander. Infinite possibilities.

A new generation of intelligent aerial systems that operate as a coordinated team — not independent drones. Inspired by nature, powered by AI, built for scale.

01

SCALABLE

Deploy swarms of any size — from 3 to 300 drones — on a single mission.

02

INTELLIGENT

AI-native architecture enables real-time decision-making at the edge.

03

RESILIENT

Distributed design means no single point of failure. The swarm adapts.

"A scalable swarm ecosystem — where one mission commander supervises AI-powered drones adapting with minimal human input."

The Problem

Why single-drone systems fall short

Today's drone operations are built around individual aircraft — effective, but fundamentally limited.

01 Limited Coverage

Single drone covers a fraction of large-area missions, forcing multiple sorties.

02 Single Point of Failure

One drone going down stops the entire mission with no fallback.

03 Manual Coordination

Deploying multiple drones today requires heavy, error-prone human coordination.

04 High Operator Workload

Pilots must monitor each unit individually — unscalable and cognitively demanding.

05 Poor Scalability

Current systems can't grow efficiently for time-sensitive, large-scale

MARKET SIGNAL

Industries increasingly rely on autonomous aerial systems — creating an urgent need for intelligent multi-drone coordination.

Our Solution

One intelligent system. Many drones.

Project Firefly treats every drone not as an independent unit, but as a node in one collective intelligence.

Every drone can:

- Communicate with neighboring drones
- Share real-time mapping & mission data
- Coordinate & adapt flight paths
- Dynamically reassign tasks mid-mission
- Continue operating after drone loss

THE RESULT

A resilient, scalable, intelligent swarm completing complex missions more efficiently than any traditional drone system.

Core Technology

Five integrated technology layers

01

Autonomous Navigation

- GPS-assisted navigation
- Mission planning engine
- Obstacle awareness
- Return-to-home & failsafe

02

Swarm Intelligence

- Multi-drone coordination
- Formation flight control
- Distributed task allocation
- Leader-follower behaviors

03

Artificial Intelligence

- Onboard edge AI inference
- Computer vision
- Object & event detection
- Mission adaptation

04

Communication

- Secure drone-to-drone mesh
- Real-time telemetry
- Ground station integration
- Low-latency data sync

05

Modular Architecture

- Swappable payload support
- Hardware-agnostic design
- SDK for custom missions
- Simulation & test tools

Product Roadmap

Four phases to a complete swarm ecosystem

Target Market

Broad, high-value application verticals

Defence & Security

Tactical ISR, perimeter patrol, and swarm-based deterrence across complex terrains.

Search & Rescue

Rapid deployment across large disaster areas. Coordinate swarms to locate survivors faster.

Disaster Response

Real-time situational awareness after earthquakes, floods, or wildfires for first responders.

Infrastructure Inspection

Pipeline, power grid, and bridge inspection without risking human crews.

Environmental Monitoring

Coordinated swarm surveys of forests, coastlines, and protected habitats.

Large-Area Mapping

High-resolution orthomosaic maps and 3D models generated in parallel by a multi-drone team.

Defence + Search & Rescue

Priority sectors

8+ Verticals

Addressable markets

Civilian & Industrial

Dual-use platform

Competitive Advantage

What sets Firefly apart

01 AI-Native Architecture

Swarm intelligence is not bolted on — it is built into the core of every component from day one.

02 Modular Design

Hardware and software can be independently swapped, enabling rapid adaptation to new mission profiles.

03 Scalable Multi-Drone Coordination

From 3 to 300 drones, Firefly's decentralized design scales without exponential complexity.

04 Edge Intelligence

AI inference runs onboard each drone — no cloud dependency, lower latency, resilient in comms-denied environments.

05 Open Integration

SDK and API-first approach enables third-party developers, researchers, and enterprises to build on Firefly.

06 Real-Time Collaborative Autonomy

Drones share, interpret, and act on live mission data together — not sequentially but simultaneously.

The only platform combining AI-native swarm intelligence with open, modular architecture

Long-Term Vision

From product to platform to ecosystem

Horizon 1

Swarm Product

A flagship swarm drone system deployed across defence, SAR, and infrastructure — establishing Storm Industries as the category leader.

Horizon 2

Developer Platform

Firefly SDK opens to developers and researchers, enabling a community of mission-specific applications built on Firefly infrastructure.

Horizon 3

Autonomous Ecosystem

A complete aerial intelligence ecosystem — Firefly Core, Link, Mission Control, and Edge AI — powering organizations globally.

OUR AMBITION

Storm Industries aims to become the global leader in autonomous aerial intelligence — enabling developers, researchers, enterprises, and public sector organizations to deploy intelligent multi-drone systems at any scale.

Category Leadership

Global Deployment

Developer Ecosystem

Policy Partnership

Let's build the future of autonomous flight.

We are seeking strategic partners and investors to accelerate
the development and deployment of Project Firefly.
